PERSONAL STATEMENT

- During the last couple of years, I began developing a new fondness for building websites in my free time using primary coding language such as HTML, CSS while studying to expand my knowledge. When I've got spare time, I love to learn new skills and challenge myself; I've been using websites such as YouTube and lynda.com to learn the latest Adobe creative suite. While in my third year at Edge Hill, I have studied a wide range of modules, including data-driven design, user experience and mobile app development. I feel a lot more confident about my skills from my portfolio projects and freelance work. I'm now looking for a graduate job in front end design and development.

RELEVANT KEY SKILLS

Teamwork/Project management

- I've been successful with teamwork in the past, especially with group projects at university. For example, I worked with three other classmates to redesign a website's front end for a local business. I took responsibility for organizing our meetings.
- I'm committed to making my teams succeed. I'm adaptable to what is needed. If the team needs a leader, I can lead if it needs a worker. I will put in the effort. I handle different personalities on teams by being polite and professional.

Programming Languages/Skills

Tools: Adobe Photoshop, Adobe Lightroom, Adobe Premiere, Microsoft suite

Proficient: HTML – CSS

Basic Experience: Vuejs JavaScript library – Python – Laravel – LaTeX – PHP
